

B2B-Take Back Concept - information on taking back old devices - as of February 2024

According to the EU Directive 2002/96/EC of the European Parliament and of the Council on Waste Electrical and Electronic Equipment (WEEE) and the updated Directive 2012/19/EU, there is an obligation to collect waste electrical and electronic equipment, to be treated properly and disposed of in an environmentally friendly manner and to finance this.

In our case, old devices are defined as digital dial indicators and digital dial indicator devices that are no longer used and have become waste. It is the owners' responsibility to collect old appliances separately from normal municipal waste. These do not belong in household waste, but must be sent to special collection and return systems.

According to the German Electrical and Electronic Equipment Act (ElektroG §7a), every manufacturer is obliged to provide a practical option for returning old devices.

We offer you the opportunity to dispose of our old electrical devices in an environmentally friendly manner through us. Through professional and sustainable recycling, valuable raw materials can be recovered and the environment can be protected.

You therefore have the option of sending your old device back to us at your own expense. There are no additional costs for the disposal of old devices on the part of the sender.

If you have any questions about returns, we will be happy to help you.
